Dave, my thought is that we temporarily supply a generator to power our rental tank system until the situation gets resolved. Is that still projected for tomorrow? I don't favor doing anything to the Cabot system. Let's talk later today. Do you know the electrical company the Horn's are dealing with?

Subject: [Ex. 6 - Personal Privacy] rd update
Rich,

When I was out checking the water systems this morning I seen that the power is not on at [Ex. 6 - Personal Privacy] and they have the extension cords still running to the other mobile home. When I checked the Cabot tank it was down about 25 gallons from yesterday afternoon when Paul & I were over there so the Jet pump had been working.

However I did also notice that the jet pump for the Cabot supplied water system is also hot and constantly running, when I tipped the enclosure so I could see the pump gage it was reading 20psi which I believe means that the pump is not functioning at this time, so I unplugged the pump from the extension cord supplying power from the other trailer. I am thinking that possibly the low electrical supply is causing this situation, when I go back out about 10am I will plug it back in and see if it works.

However if it does not, do you want us to supply power to the [Ex. 6 - Personal Privacy] water trailer with a generator full time so it can function as it was designed to do? Or do you want to have a plumber look at the jet pump on the Cabot system and see why it is not functioning and possibly repair it? Or do nothing at all?

Let me know your thoughts.
